

## folded panel fascia

aluminium / composite (dibond)

## manufacture

 the first and most vital signage to consider, shop fascias are folded from 2mm aluminium or 3mm composite material. they create a very attractive, frameless modern appearance. they are both light weight & corrosion resistant. aluminium panels are box and pan folded with almost seamless joints and have aluminium tig welded ends.

Marie Allen - Pop through halo lit

## enhanced features

-  detailing can be added such as top profile to create anti-drip lid, accentuating a modern overall look.
-  rolled or folded pillars can be added to both types of panel fascia to frame your retail window.
-  a bespoke slim line projecting sign can be manufactured into the sign fascia to further enhance the appeal.

## roller shutter

 got a projecting roller shutter protruding out? no problem we can make a custom aluminium tig welded bracket & space frame to cover over the roller shutter to which the complete sign fascia is attached. this encloses the unsightly shutter box inside the sign and the pillars hide greasy shutter rails. key switch for shutters can be neatly built into pillars.

## finishes

2mm aluminium fascias have a high quality gloss or satin finish available in a wide range of ral colours or matched to pantone colours.

3mm aluminium composite is available in a range of brushed metal finishes - aluminium, gold, copper, metallics and wood effect finishes.

range of available colours in 3mm aluminium composite

Pit-Stop, Kilkeel - 3D built up letters front lit

## lighting effects

fascia options include non-illuminated, internally illuminated and face illuminated by use of trough light. cut out pop through letters can be used to create halo lighting effect.

see our brochure on 3D letters & LEDs.

## pop through letters

your text or logo can be cut out of the aluminium panel and a machined translucent letter inserted with precision into the cut panel from the rear. this allows the face or the edge of the text or logo to illuminate.
